

Materials

Reagents

Microtubes of varying colors
dH₂O

Equipment

200 ul pipettes
200 ul tips
96 well plate

Pre-Lab: Pipetting Suncatchers¹

Background

To get more pipetting practice for upcoming labs, we will pipette different colored liquids to form a picture using a 96 well plate and reading a coordinate system. Just like Battleship, 96 well plates have letters and numbers to note location of one well. The first well is A1, second B1 and so on. A scientist can use these coordinates to separate 96 different experiments in this small space.

*This lab is to get each student ready for the next set of labs. Make sure that every lab partner is practicing by allowing each to pipette some of the picture coordinates.

Protocol

1. Pick the picture you will create.
2. Figure out which colors will be used in your picture choice.
3. If you have the color, pipette 125ul of the color into the corresponding well.
4. Then pipette 25 ul of DH₂O into that same well to equal 150 total ul.
5. If you have to mix colors to create the color, ie Blue and Yellow to make Green use 75 ul of each color to equal 150ul.
6. When finished with your coordinates, determine what picture was created.
7. Using Colored pencils or crayons, color in the 96 well diagram on the next page.
